ABSTRACT

An optical-controlled and voice-controlled optical fiber skipping-rope mainly includes a voice-controlled constructional body, an
5 optical-controlled constructional body and a luminescence constructional body. The voice-controlled constructional body and the optical-controlled constructional body are connected by the luminescence constructional body so as to form an optical-controlled and voice-controlled optical fiber skipping-rope. Due to its lighting optical fiber control and amusing music
10 control, it can be used at night and has the amusing effect at the same time.
